

Timekettle ZERO Translator: Reinventing the Translator by Acoustic Vector with 4Mic Array

*Don't miss the highly anticipated launch of Timekettle Tech 'Zero Translator' at
DISTREE EMEA 2020 – a compact, convenient and 90% accurate translator*

7 Nov, 2019 – Globalization has paved way for businesses to transcend geographical boundaries – as a result, this has led to language barrier challenges.

Timekettle Tech is actively working towards defusing these communication barriers with their unique design and AI-based translating devices, such as **WT2 Plus Translator Earbuds**--the world's first AI-powered translation system, which, due to their innovation and success, have also landed a number of awards including Good Design, iF IDEA CES Innovation Award 2019.

- The modernistic device is far superior to conventional translators; with the help of AI technology, the device is able to comprehend over 84 accents and translates it into a number of languages. To keep their devices up to date, Timekettle Tech also releases periodic software updates. The latest “Simul Mode” is delivering a simultaneous translation, which makes AI translation closer to an interpreting style.

Touch Mode

The company looks forward to offering its customers the latest technology as well. With the spirit of innovation in voice algorithm, Timekettle is planning to launch the “**ZERO Translator**” in 2020's, which has the most powerful and smallest 4 Mic array, driven by acoustic vector signal processing technologies. It allows **ZERO** to distinguish four speakers at the same time. Being carried on “Timekettle” App, ZERO Translators has the functions to seamlessly cater to all your translating needs, whether it be interview or meeting translation. It will be launched at the highly anticipated technological fair, DISTREE EMEA, which will be held in Monaco between 18th to 21st February.

About Timekettle Tech

Timekettle was founded in 2016 and has millions of dollars invested, they have become

a globally renowned brand for AI translators. It is considered as a pioneer because of its full voice algorithm, machine translation, hardware technologies layout.
